The background of the slide is a close-up, black and white photograph of a large stack of metal pipes. The pipes are arranged in a regular, repeating pattern, filling the entire frame. The lighting creates highlights on the edges of the pipes, giving them a three-dimensional appearance. The text is overlaid on this background in a white, sans-serif font.

Long-term experience in the following works:

- Pipe Fiber laser cutting
- CNC bending
- CNC milling
- Projection welding
- Robot welding

Who we are

The company's origin dates back to 1964, with the production of wrought-iron home items featuring handmade manufacturing.

Thanks to the company's experience and to its constant evolution, Mo.mec became a leading producer of iron and aluminium metal frameworks for home, office, shop and garden furnishing as well as components for industrial cleaning machines and shops display stands.

Our points of strength are extreme versatility and constant attention to the quality of our products: it does not matter if they are raw, requested by customers for further working, or finished, assembled and packed for final customers.
